

Power BI Desktop:-

- Power BI Desktop is the free version of Power BI that one can install on your local computer as a program.
- Can connect and import data from over 70 cloud-based and on-premises sources.
- Auto-detect that finds and creates data relationships between tables and formats.
- Has certain limitations like no API embedding, no application workspaces.
- Price: - its free

Power BI Pro:-

- Power BI Pro is the full version of Power BI.
- Pro users are licensed individually and participate fully in the use of Power BI – both the creation of content and the consumption.
- All Pro users can connect to hundreds of data sources on-premises and in the cloud, create interactive reports and 360-degree dashboards, share that content with other Pro users, and consume content shared by others.
- Price:- \$9.99 per month

Power BI Premium:-

- It gives licensing capacity for your content rather than licensing all users of that content.
- Content (datasets, dashboards, and reports) is stored in Premium and can then be viewed by as many users as you want, without additional per-user costs.
- These users can only view content, not create it. Viewing includes looking at dashboards and reports on the web, in our mobile apps, or embedded in your organization's portals or apps. The creators of content in Premium still need their own Pro licenses.
- It comes with Increased data capacity limits and maximum performance.
- Price:- \$4995 per month
